

the Toaster that sets a New Standard

GST Gold Standard Toaster

The latest toasting innovation by Antunes — the Gold Standard Toaster — has raised expectations for equipment in the foodservice industry. With a new, dual-belt drive system, the Gold Standard Toaster far outperforms traditional bun toasters to provide operators with better reliability, results, and savings. Its exceptional performance has earned awards from the largest and most successful operations in the industry.

✓ **BETTER RELIABILITY**

Extensive quality data from multiple foodservice operations shows the Gold Standard Toaster exceeds the highest standards of reliability, making it a consistent and dependable fixture for restaurant owners.

✓ **BETTER RESULTS**

The dual-belt drive of the Gold Standard Toaster cradles buns as they move along the platen, eliminating defects such as slipping, sticking, marking, discoloring, and sloping to provide a high-quality toast each time.

✓ **BETTER SAVINGS**

The innovative design of the Gold Standard Toaster locks the heat inside the toasting chamber, which saves operations hundreds of dollars in annual energy costs compared to other toaster models.

Gold Standard Toaster

Different Options for Different Needs

The Gold Standard Toaster is the latest innovation from Antunes, a recognized leader in bun toasting. More and more operations are turning to Antunes for their toasting needs, which means our catalog of Gold Standard Toasters is quickly expanding to include different configurations.

CAPACITY

Restaurants need a toaster that can keep up with the demand of their customers. The Gold Standard Toaster has up to five different toasting lanes so that operations can serve menu items on high-quality toasted buns without sacrificing ticket times.

ORIENTATION

Cramped kitchens can make purchasing equipment challenging for operators. With both horizontal and vertical orientations available, the Gold Standard Toaster can be easily integrated into restaurants of any size.

FLAVOR

For operations that want to give their toasted buns something extra, the Gold Standard Toaster has an available wheel that allows crew members to quickly apply an even layer of butter to buns prior to loading into the unit.

FLEXIBILITY

The Gold Standard Toaster can easily handle menu changes. Whether it's a variable speed motor or lane configurations for specialty products, including two-sided toasting in a single pass, this toaster provides operations with the flexibility they need.
